Epoxiglas<sup>®</sup> Railing must be ordered as separate item.

Strut base folds against board for easy transport and storage.

## STANDARD AERIAL PLATFORMS

Chance Platforms provide a convenient workstation on an aerial structure. Quickly mount on the structure to place workers in the correct relationship to the work area.

### Mounting Options and Accessories

These platforms are furnished with a Fixed Pole Mount for maintenance jobs that do not require frequent platform relocation. Pivot Mounts (see mounting attachments) allow the platform to be swiveled on its horizontal plane to different positions for a certain operations. For belt-on and as restraining guides, Epoxiglas Tripods or Railings may be added.

### Non-skid surface

For improved footing, three strips of 2" non-skid tape extend the length of the platform working surface. A bare section near the mounting end helps reduce moisture accumulation and provides an area between the working surface and the mount fittings that can be readily wiped clean of dirt and moisture when necessary.

Each Standard Aerial Platform below is 10" wide and furnished with a Fixed Pole Mount.

PART	DESCRIPTION	WT.
H4964-42W	42" Standard Platform	40 lb.
