ERECTION WRENCHES

Drop-forged from select alloy steel to withstand high-leverage and heavy loads. Extra-deep offset handle provides additional hand-clearance. Continuous taper of handle makes lining up bolt holes easy, allows use on a range of bolt hole sizes. Extra-large hub area allows use on larger diameter holes. Number, bolt size, and nominal opening size are stamped on wrench for easy identification.

3238 - 1/2" SQUARE DRIVE RATCHETING CONSTRUCTION WRENCH

1/2" square-drive, hex socket, reversible ratchet eliminates the need for carrying several fixed-size wrenches. Drop-forged from select alloy steel with continuous taper handle for aligning bolt holes. Industrial black finish. 15" Overall Length.

3255 - BROAD-HEAD BULL PIN

This improved bull pin provides a larger striking surface. Head design reduces chance of pin slipping from the hand when aligning holes. Squared-off shoulders have been forged to provide a surface for applying a wrench to loosen wedged bull pins. Long, even taper reduces binding and hang-up. Broad-head bull pins resist "mushrooming", permitting longer use than conventional designs. 1-1/4" Top Dia., 5/16" Point Dia., 13" Length.

NOTE: OSHA specifically states, "impact tools such as drift pins, wedges, and chisels shall be kept free of mushroomed heads."

BARREL-TYPE DRIFT PINS

Drop-forged steel, will properly end-pein in use.
