

Tooling solutions for the power utility industry.

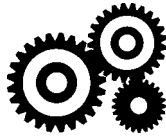

Size: 7"W x 9"H

Weight: 4 lbs.

Capacity:

Wire Clamp 6AWG -750KCM

RELIABLE - URD PORTABLE VISE

The URD vise can be easily carried to any job site to hold cable firmly in place during servicing. Operating on the Vise-Grip principle, the URD vise grips just like a bench vise. It allows workers to use both hands, providing greater safety and convenience, and permitting more accurate stripping measurements. This vise is excellent for preparation of cable terminations, splices and connections. The URD vise is ideal for any utility field application or buried cable operation such as the installation of elbows, bucket truck jobs, or transformer installations.

Versatile Field Tool

This vise can be mounted anywhere that a "clampable" surface is available on concrete blocks, bucket walls, truck beds or doors.

Choice of Mounting Angles

A universal joint provides a choice of mounting angles, allowing proper positioning of the cable for maximum convenience.

Accommodates a Variety of Cable Sizes

The wire holding pads have multiple channels to secure all sizes of jacketed cables from 6AWG to 750KCM aluminum.
