

Tooling solutions for the power utility industry.

ROBO™ BATTERIES - For ROBO Battery Powered Cutting and Compression Tools Huskie is keeping up with your tooling needs and making your work easier by adding more options for our ROBO* series of battery powered tools. We now offer several different batteries which will accommodate every tool in our ROBO family.

BP-70R

BP-70R - STANDARD REPLACEMENT BATTERY

This 14.4 volt battery is interchangeable with all Huskie ROBO™ products. The battery's life expectancy is approximately 1,000 recharges. Cycles per charge will vary depending on the type and size of the material being cut or compressed.

BP-70I

BP-70I - "SMART" REPLACEMENT BATTERY

This model is the same as the BP-70R with the addition of an LED display that will indicate its power capabilities. It is self-evaluating, allowing the user to monitor the status of the battery's total life and power between charges. Capacity is shown with an LED indicator of five red lights on its side. Different light patterns give specific battery information. Example: The bottom red light begins to flash, warning that 10% of the battery power remains and it must be recharged soon. The battery is fully charged if you push the "check" button and all five lights turn on. To check battery recharged cycles, depress "check" button once, release, and depress again while LED lights are on, and hold approximately 10 seconds until LED pattern is displayed.

BP-250RI

BP-250RI - DEEP CYCLE, EXTENDED LIFE BATTERY PACK

This model has 3 times the capacity of our other batteries and it can be used in situations where the operator needs longer lasting battery power.

BP-250RIS - Same as above with a short cord and can be used with the REC-P500. Consult factory when ordering.

The Huskie BP-70R and BP-250RI batteries carry a full 5 year warranty, from the date stamped on the battery.

The BP-70I carries a 1 year warranty from the purchase date. In the instance where the LED indicator is damaged, the battery will still operate and does not have to be replaced. (This feature is independent of the power circuit)

When it is time to dispose of the battery, you may return the spent cells to Huskie for recycling, or send them to a recycling center that accepts Ni-cad batteries.

**Never incinerate these or any Ni-cad batteries.*
