

Tooling solutions for the power utility industry.

G-99 - GLOVE INFLATORS

Periodic inflation and air test provide the best means of visually inspecting Rubber Insulating Gloves. SALISBURY inflators enable gloves to be inspected inside and out for ozone or age checking, chemical deterioration, tie wire scratches, snags, or punctures.

The G-99 Glove Inflator features durable construction of corrosion resistant PVC coated steel. PVC bellows provide easy inflation for thorough field inspection without fatigue. The "O" Ring retainer and web/velcro glove retaining strap hold the glove during inflation and visual inspection.

Contact Reliable Equipment for options and replacement parts.

SALISBURY - TEN-FOUR GLOVE DUST

Cooling, soothing, and frictionless. "Ten-Four" Glove Dust is produced for linemen's comfort while wearing Rubber Insulating Gloves and Sleeves. Glove Dust absorbs moisture and perspiration but does not harm the skin or reduce the dielectric values of personal protection equipment. It also acts as a lubricant and helps prevent sticky gloves.
