

Tooling solutions for the power utility industry.

**EYELET
BLANKET**

**SLOTTED
BLANKET**

INSULATING BLANKETS

Cover-up device for protection against contact with irregular shaped line hardware or apparatus where no specific cover is available. Blankets may be secured by Blanket Pins, Ty-Straps or buttoned, or tied down using the eyelets. Eyelets are reinforced for additional strength.

EYELET BLANKET - *Contact your Reliable representative for sizes and options.* The original and most popular Insulating Blanket. The reinforcing beaded edge and reinforced eyelets give the blanket additional strength and resistance to tear.

SLOTTED BLANKET - *Contact your Reliable representative for sizes and options.* The slotted design is ideal for ridge pins, cross arms with insulators, or anywhere a wire, pin, or projection interferes with the proper placement of other cover-up devices.

CAUTION: Conductor movement or high winds may cause the displacement of blankets held by blanket pins. In these situations, blanket buttons, Ty-straps or rope should be used.

PINS - CLAMP TYPE FOR INSULATING BLANKETS & OTHER APPARATUS

Used to secure insulating blankets, some insulating covers, and line hose connectors.

Part	Description	Jaw
20	Wood w/Pin Boots, 8.5" OAL	4.75"
21	Nylon w/Pin Boots, 9.5" OAL	5.0"
HS21	Nylon w/ Pin Boots, 9.5" OAL	5.0"
26	Wood w/Pin Boots, 10" OAL	7.0"
PB	Pin Boots	

TY-30

TY-14" & 30" - TY-STRAPS

1-1/2" wide strips of rubber, with Velcro[®] fasteners affixed to each end. Simply wrap around the blanket and press the fastener ends together.

BLANKET BUTTONS AND HOLDERS

B-1 Button - Secure SNAP-BUTTON Style Insulating Blankets. Made of hard yellow plastic, the extra large head keeps the button in place.

B-23 Two-Way Button - Hot stick button molded of bright orange Hi-Impact Polystyrene.

MB-6 Magnetic Holder - For barricading, covering, or isolating energized portions or grounded equipment in pad mounts, cubicles, switchboards, substations, or other hard to cover areas.
